About Howard Energy Partners

Midstream Oil and Gas:

- 900 miles of pipe in TX
- 10 miles of pipe in NM
- 150 miles of pipe in PA
- 190 miles of pipe in Mexico
- 200 MM/Day Cryogenic Plant in Laredo, TX
- 10K bbl/day stabilizer in Three Rivers, TX
- Paraffin/Lube Oil/Fuel Oil Terminal and Storage in Brownsville, TX
- Crude Oil Terminal and Storage in Port Arthur, TX
- Gasoline/ULSD pipeline in Port Arthur, TX
- Crude Oil Terminal and approximately 80 miles crude gathering system in Loving County, TX
- Cryogenic Plant in Reeves County, TX

Products Transported and Counties Involved

Product	Description	Health and Fire Hazards	Counties Involved
Lean and Rich Natural Gas	Leak: Gas Vapor: Lighter than air and will generally rise and dissipate. May gather in a confined space and travel to a source of ignition.	Health: Will be easily ignited by heat, sparks or flames and will form explosive mixtures with air. Vapors may cause dizziness or asphyxiation without warning and may be toxic if inhaled at high concentrations. Contact with gas or liquefied gas may cause burns, severe injury and/or frostbite.	Dimmit Frio Jefferson La Salle Live Oak Loving Maverick Nueces Reeves Uvalde Webb Zavala
NGLs	Leak: Gas Vapor: Initially heavier than air, spread along ground and may travel to source of ignition and flash back. Product is colorless, tasteless and odorless.	Health: Will be easily ignited by heat, sparks or flames and will form explosive mixtures with air. Vapors may cause dizziness or asphyxiation without warning and may be toxic if inhaled at high concentrations. Contact with gas or liquefied gas may cause burns, severe injury and/or frostbite. Fire may produce irritating and/or toxic gases.	
Crude Oil	Leak: Liquid Vapor: Heavier than air Can be flammable. Dark brown spots on the ground, dead vegetation or an oily sheen on top of the ground or floating on the surface of a body of water may indicate the presence of a leak in a crude oil pipeline system.	Health: Irritation of the eyes and skin may occur with exposure. Vapors may cause central nervous system effects. Fire: Crude oil is an extremely flammable liquid or vapor that is heavier than air. May accumulate in low areas, and may travel considerable distances to an ignition source.	
2018 Gasoline and Diesel	Leak: Liquid Vapor: Initially heavier than air and spread along ground and collect in low or confined areas. Vapors may travel to source of ignition and flash back. Explosion hazards indoors, outdoors or in sewers.	Health: Inhalation or contact with material may irritate or burn skin and eyes. Fire may produce irritating, corrosive and/or toxic gases. Vapors may cause dizziness or suffocation. Runoff from fire control or dilution water may cause pollution.
